

Alejandro Echeverri

Architecture, Urbanism, Environmental Projects, and Planning

Date of birth: 05/20/62 **Nationality:** Colombian **Marital status:** Married

- Alejandro Echeverri is an internationally architect and planner from Medellín, Colombia. He is cofounder and Director of URBAM, the Center for Urban and Environmental Studies at EAFIT University. His experience combines architectural, urban, environmental projects and planning. He has also collaborated as professor, lecturer and juror for various international and national architectural institutions. His work earned the National Architectural Award SCA in 1996, the National Urban Planning Award SCA in 2008, the Pan-American Biennale Urban Design Award Quito 2008, the Curry Stone Design Prize in 2009, the 10th Veronica Rudge Green Prize in Urban Design from Harvard 2013, among others. In addition, as The General Manager of the EDU, Empresa de Desarrollo Urbano (Institute for urban development of the municipality) from 2004 to 2005, and the City's Director of Urban Projects for the Municipality of Medellín from 2005 to 2008, where he led the conceptualization and implementation of Social Urbanism, Echeverri has played a crucial role in the improvement of the city. With the support and partnership of the city's mayor, Sergio Fajardo, Echeverri established public works programs and initiated building a series of visually striking libraries, schools, parks, and community centers in Medellín's most impoverished areas. The works program included urban integral projects that connect some of Medellín's poorest and most isolated neighborhoods to the rest of the city. Because of these efforts and his belief in the power of design, Medellín is now considered a blueprint for the future of other cities in the developing world. In addition to his work in Medellín, he also has a broad experience as a national and international consultant and advisor of multidisciplinary teams for urban, environmental and social projects. He also has a wide experience as an architect designing a variety of projects from his studio Alejandro Echeverri + Valencia Architects, in themes such as housing, museums, innovation centers, public spaces, parks etc. His intellectual production includes writing articles for magazines specializing in architecture and urbanism, publishing of books and opinion articles in national newspapers.

EDUCATION
